

Metal Wall Box VS. Personal Hygiene Disposal

Manual disposal requires **touching the lid** which can **harbour diseases** like **COVID-19, HIV and Hepatitis**

Quickly **overflows** forcing people to dispose of **menstrual and incontinence** products in the toilet causing **pipe blockages**

Biohazardous waste gets **handled as regular waste** by maintenance staff

Waste is disposed of in landfill

Improper disposal causes malodours throughout the washroom and **leaves a bad impression** of your business on the customer

Aesthetically **unpleasant** to look at

Touch-free unit allows for **safe disposal** without having to **come into contact** with potentially **harmful bacteria**

Regularly serviced to **prevent overflow** and **eliminate the need for alternative forms of disposal**

Biohazardous waste is **safely handled** by a **trained hygiene technician**

Unit is equipped with **Actiwipe** to **treat waste and control odours** for a fresh smelling washroom

COVANTA **Waste is diverted from landfill to energy production**

Powering Today. Protecting Tomorrow.

Designed to look great in **every washroom** with decorative wraps available for a sleeker look
